## The Diversity of Sri Lankan Ecosystems

Sri Lanka's wildlife diversity is fundamentally linked to its array of ecosystems, each hosting distinct communities of plants and animals. These ecosystems are shaped by climatic zones, altitude variations, and geographical features.

### 1. Tropical Rainforests

Occupying the central highlands and some lowland regions, Sri Lanka's rainforests are characterized by high humidity, dense canopy cover, and a rich understory. These forests are among the most biologically diverse habitats on the island, home to many endemic species such as the Sri Lankan leopard (*Panthera pardus kotiya*), the purple-faced langur (*Trachypithecus vetulus*

philbricki), and numerous amphibians and insects.

## 2. Dry Zone Forests and Thickets

Located predominantly in the north and east, these ecosystems are adapted to more arid conditions. They harbor species such as the Sri Lankan sloth bear (*Melursus ursinus inornatus*) and various reptiles and insects uniquely suited to drier habitats.

## 3. Montane and Cloud Forests

Found in the central highlands, these cooler, mist-laden forests support a high level of endemism. The Horton Plains and Adam's Peak are notable sites where species like the Sri Lankan whistling thrush and the endemic purple-faced langur thrive.

## 4. Coastal and Marine Ecosystems

From mangrove swamps and coral reefs to sandy beaches and rocky shores, Sri Lanka's coastal zones are teeming with life. These ecosystems provide critical breeding grounds for fish, sea turtles, and migratory bird species.

## Key Wildlife Species of Sri Lanka

The island's diverse ecosystems support an impressive roster of species, many of which are endemic, meaning they are found nowhere else on Earth.

### 1. Endemic Mammals

- Sri Lankan Leopard (*Panthera pardus kotiya*): The apex predator of the island's forests, this subspecies is critically endangered due to habitat loss and poaching.
- Sri Lankan Elephant (*Elephas maximus maximus*): Larger than its Indian counterparts, these elephants are vital to forest ecology and are often seen in national parks like Yala and Udawalawe.

Endangered species such as elephants, leopards, and turtles are targeted for their skins, bones, and shells. The illegal pet trade also threatens many endemic bird and reptile species.

### 3. Climate Change

Rising temperatures, changing rainfall patterns, and sea-level rise threaten biodiversity hotspots. For example, montane species may face habitat shifts upward, reducing available habitat.

## 4. Human-Wildlife Conflicts

As human populations expand into wildlife habitats, conflicts arise, particularly involving elephants damaging crops and property, leading to retaliatory killings.

## 5. Invasive Species

Non-native plants and animals can outcompete indigenous species, disrupt ecosystems, and introduce diseases.

## Conservation Efforts and Future Outlook

Recognizing the importance of its biodiversity, Sri Lanka has implemented several conservation strategies to safeguard its wildlife.

### 1. Protected Areas and National Parks

Sri Lanka boasts 26 national parks and wildlife sanctuaries, covering roughly 13% of the land area. Notable parks include:
