4. Biogeochemical Cycles

These cycles describe how essential elements move through ecosystems.

- **Water Cycle:** Evaporation, condensation, precipitation, runoff, and infiltration.
- **Carbon Cycle:** Involves photosynthesis, respiration, decomposition, and combustion.
- **Nitrogen Cycle:** Includes nitrogen fixation, nitrification, assimilation, and denitrification.

2. Competition and Predation

Interactions that influence population sizes and resource distribution.

- **Intraspecific Competition:** Competition among members of the same species.
- **Interspecific Competition:** Competition between different species for resources.
- **Predation:** One organism (predator) hunts and consumes another (prey).

Adaptations and Evolution in Ecology

Organisms adapt to their environments over time, shaping ecological relationships.

1. Adaptations

Traits that improve survival and reproduction.
