Sample Questions from Prentice Hall Biology Ch 26 and Their Answers

While the assessment key covers a broad spectrum of questions, here are examples to illustrate its usefulness:

Question 1: What is the primary role of decomposers in an ecosystem?

Answer: Decomposers break down dead organic material, recycling nutrients back into the soil or water, which supports primary producers.

Question 2: Describe the difference between exponential and logistic growth models.

Answer: Exponential growth describes a rapid increase in population when resources are unlimited, resulting in a J-shaped curve. Logistic growth considers resource limitations, leading to a population leveling off at the carrying capacity, forming an S-shaped curve.

Question 3: How does nitrogen fixation contribute to the nitrogen cycle?

Answer: Nitrogen fixation converts atmospheric nitrogen (N_2) into ammonia (NH_3), which can be used by plants. This process is primarily carried out by certain bacteria and archaea.

Additional Resources for Chapter 26 Review

In addition to the assessment key, students should consider supplementary materials:
