Signs include persistent sadness, tearfulness, feelings of worthlessness, difficulty bonding with the baby, fatigue, and changes in appetite or sleep patterns. Which vaccines are typically recommended during the postpartum period for maternal and neonatal health? The Tdap vaccine is recommended to protect the newborn from pertussis, and the influenza vaccine is advised to reduce maternal and neonatal illness; MMR is given preconception or postpartum if not previously received. What are key nursing interventions for a woman experiencing preeclampsia? Interventions include monitoring blood pressure closely, assessing for signs of worsening condition, maintaining bed rest in lateral position, administering antihypertensives as ordered, and monitoring fetal well-being. How can a nurse support breastfeeding mothers in the neonatal period? Provide education on proper latch and positioning, encourage frequent feeding, monitor for signs of engorgement or mastitis, and offer emotional support and reassurance.
