Step-by-Step Guide to Core WAEC Technical Drawing Topics

Orthographic Projection

Orthographic projection involves representing a three-dimensional object in two dimensions through multiple views (front, top, side).

How to Approach:

- Visualize the object clearly.
- Start with the front view, then project lines to locate the top and side views.
- Use accurate measurements and standard projection methods.
- Label views clearly.

Tips:

- Remember the conventions for line types: visible edges (solid lines), hidden edges (dashed lines), and centerlines (long dash-dot).
- Practice projecting different objects to build confidence.

Isometric Drawing

Isometric drawings depict objects in three dimensions, maintaining scale along three axes inclined at

120°.

How to Approach:

- Begin with the basic shape, sketching the three axes.
- Use a ruler and set square to draw lines parallel to axes.
- Draw the outline, then add details.
- Keep proportions consistent.

Tips:

- Use isometric paper for accuracy.
- Practice drawing simple shapes like cubes, pyramids, and cylinders.

Sectional Views

Sectional views reveal internal features by "cutting" through an object.

How to Approach:

- Decide the cutting plane (full or partial).
- Draw the object with the cutting plane indicated.
- Show the sectioned area with hatching lines.
- Include hidden details as necessary.

Tips:

- Practice different types of sections: full, half, offset.
- Clearly label sections and views.

Detail and Assembly Drawings

Detail drawings focus on individual parts, showing all features at a larger scale. Assembly drawings depict how parts fit together.

How to Approach:

- For detail drawings, include dimensions, notes, and material specifications.
- For assembly drawings, illustrate the parts in their assembled position, indicating fasteners and joins.

Tips:

- Use standard symbols and conventions.
- Keep drawings neat and well-labeled.
